The Race to Birmingham— 360 years of timetables

GEOFFREY CLIFTON

I CREATED THIS CHART TO SHOW my Master of Transport Management students how the railways have evolved over the years and to motivate a discussion of what benefits this has brought to the travelling public. I chose the journey from London to Birmingham because this is both the oldest timetable (1841) in my collection and the newest (the proposed High Speed 2 (HS2) rail line is due to open in 2026). In the process, I discovered evidence of a 'Race to Birmingham' to rival the later 'Race to the North' and uncovered some of the timetable gems available online.

The coach era

Even before the coming of the railway, travel times between London and Birmingham were improving immensely through a combination of better roads and faster coaches. Jenni Coles-Harris has discussed the history of the London to Birmingham stage coach on her readable blog <http://mappingbirmingham.blogspot.co.uk>. In 1659 the trip from London to Birmingham took four days, by 1731 the first regular weekly service took only two and a half days. By 1837, on the eve of the opening of the first railway, Leigh's New Pocket Road-Book of England and Wales listed the journey time by coach as 11:56.

The Railway Era

The London and Birmingham Railway (part of today's West Coast Main Line or WCML) was opened between Euston station and Birmingham's Curzon Street station in 1838. Francis Coghlan published a time table for the new railway in his book

James Pollard's "The 'Tally-Ho' London - Birmingham Stage Coach Passing Whittington College, Highgate" 1836 on display at the Tate Britain gallery.

"The Iron Road Book and Railway Companion from London to Birmingham, Manchester and Liverpool". The timetable is instantly recognisable as such and shows fast departures from London at 08.00, 11.00 and 16.00, each taking 05:37 to reach Birmingham.

The oldest copy of Bradshaw's guide that I have found online is from the 10th month of

1839 (as a Quaker, Bradshaw eschewed months). By then the fastest train was the 09.30 Mail, timed to arrive in Birmingham five hours later at 14.30. By 1841, the official timetable showed that the Mail was now due to leave fifteen minutes later but still arrive at the vague time of 'about 2 1/2' after six intermediate stops.

Interestingly, the timetable states that 'The times of the Trains conveying the Mails are fixed by the Postmaster General, under the powers granted by Act of Parliament, Act 1 & 2 Vic. cap. 98.' Why was this information considered relevant for a public timetable? The time table itself is taken from the 'LMS Centenary of the opening of the first main-line railway' publication of 1938.

Birmingham Bypassed and renewed competition

As the decade of the 1840s progressed, travel times improved steadily. By 1846, the fastest train on the LNWR (successor to the London & Birmingham Railway) was the 17.00 1st Class Express which took 3:00 but by 1848, this train had been slowed down to 3:20. The construction of the Trent Valley Line meant that trains to the North of England and Scotland no longer needed to travel via Birmingham.

However, competition was renewed with the opening of the Great Western Railway

Fastest journeys: London to Birmingham

(GWR) line to Birmingham via Oxford in 1852. Five years later, the GWR held the lead in travel times with the 09.15 from Paddington to Birmingham Snow Hill taking 2:50. The LNWR also had a service at 09.15 from Euston but this arrived in Birmingham fifteen minutes after its rival. The LNWR's fastest service was the 11.45, which the GWR chose not to compete with and both offered services at 17.15 which took 3:05 to reach Birmingham.

The LNWR took the honours in the 1895 Bradshaw with the 16.30 'Birmingham Express' which took only 2:35 minutes with four intermediate stops. The competing Great Western Railway's 'Birmingham and North Express' left at 16.45 and only stopped at Oxford but took 2:41 minutes to arrive at Birmingham Snow Hill.

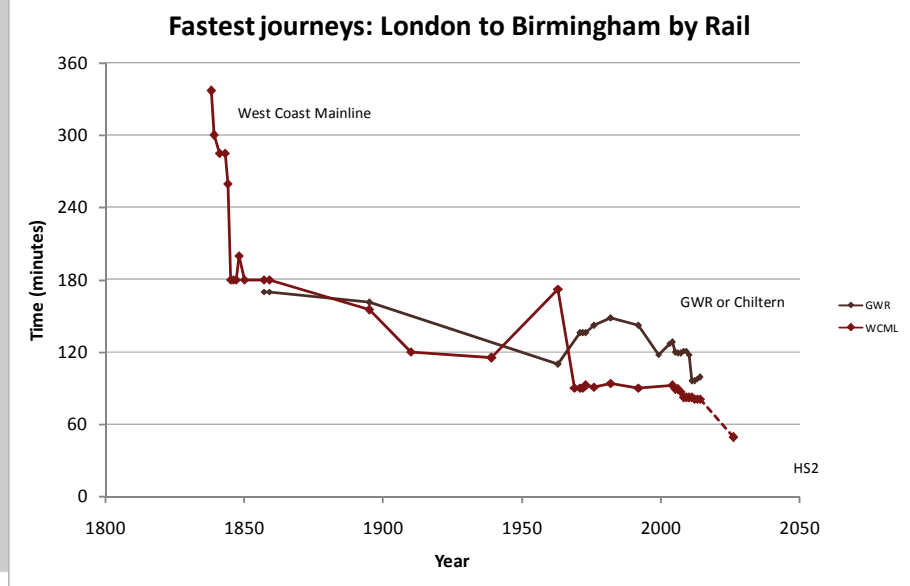

Geoff Lambert was kind enough to fill in some detail here. In 1910, services had sped up to 2:00 on the LNWR and the LMS was able to offer a service of 1:55 on the eve of World War II.

The post-war period

By 1963, competition between the WCML and Great Western Railway had turned to cooperation as British Railways moved most of the Birmingham services over to the Western Region whilst the WCML was rebuilt and electrified. The few services that remained on the WCML were slower than in 1895 but services from Paddington were noticeably faster with most expresses (including the Birmingham Pullman and the Inter-City) doing the journey in under two hours with a number of stops. The fastest journey was the 14.10 and the Mondays only 09.00 non-stop services which did the journey in 1:50 (a whole ten minutes faster in fifty years). These services travelled via what is now the Chiltern Main Line, finished in 1910 and bypassing Oxford. Express trains on this line were cancelled in 1967 after the electrification of the WCML was completed but services were restored in 1993 and have continued to grow under Chiltern Trains.

In 1969, the WCML expresses took only 1:30 to complete the journey from the rebuilt Euston Station to Birmingham New Street with one or two intermediate stops. Services were consistently fast throughout the day but the off-peak services tended to be a few minutes faster as loadings were lighter. The timetables of the early 1970s included the useful feature of a diagrammatic map showing the fastest journey times from a range of locations.

The next 35 years were surprisingly uneventful. Services remained at around 90 minutes with a few intermediate stops served. Trains served the Birmingham International Airport from 1976 and the new town of Milton Keynes from 1982. For comparison, rival services on the Chiltern Main Line from Marylebone station

are also shown. These are the successor of the GWR express services and were reintroduced in the early 1990s. A substantial investment has been made in rebuilding this line and times are now competitive with the rival service offered by Richard Branson's Virgin Trains.

The 90 minute mark was beaten for the first time in 2005 as another rebuilding of the WCML and the provision of new trains started to show benefits. The rebuilding was completed in 2008 when journey times fell to 82 minutes. Currently, services that leave Euston at 23 minutes past the hour complete the journey in 82 minutes with stops at Watford Junction, Coventry and Birmingham International. Services operate every twenty minutes throughout the day. Watford Junction, Milton Keynes and Rugby station are each served by only one of the three trains an hour [our page 5].

The chart is a work in progress. The effects of the two World Wars are not shown, although these apparently slowed journey times as the railways struggled with the need to accommodate the required troop and freight trains and the effects of less money and manpower for maintenance. I have also started a chart to show how times from Sydney to Parramatta have evolved but I lack timetables from before the middle of last decade.

Note on sources

A large number of Bradshaw's guides are available online, scanned from the holdings of various libraries. Google Books holds a number as does a database called 'The Making of the Modern World', which is available through the Sydney University Library.

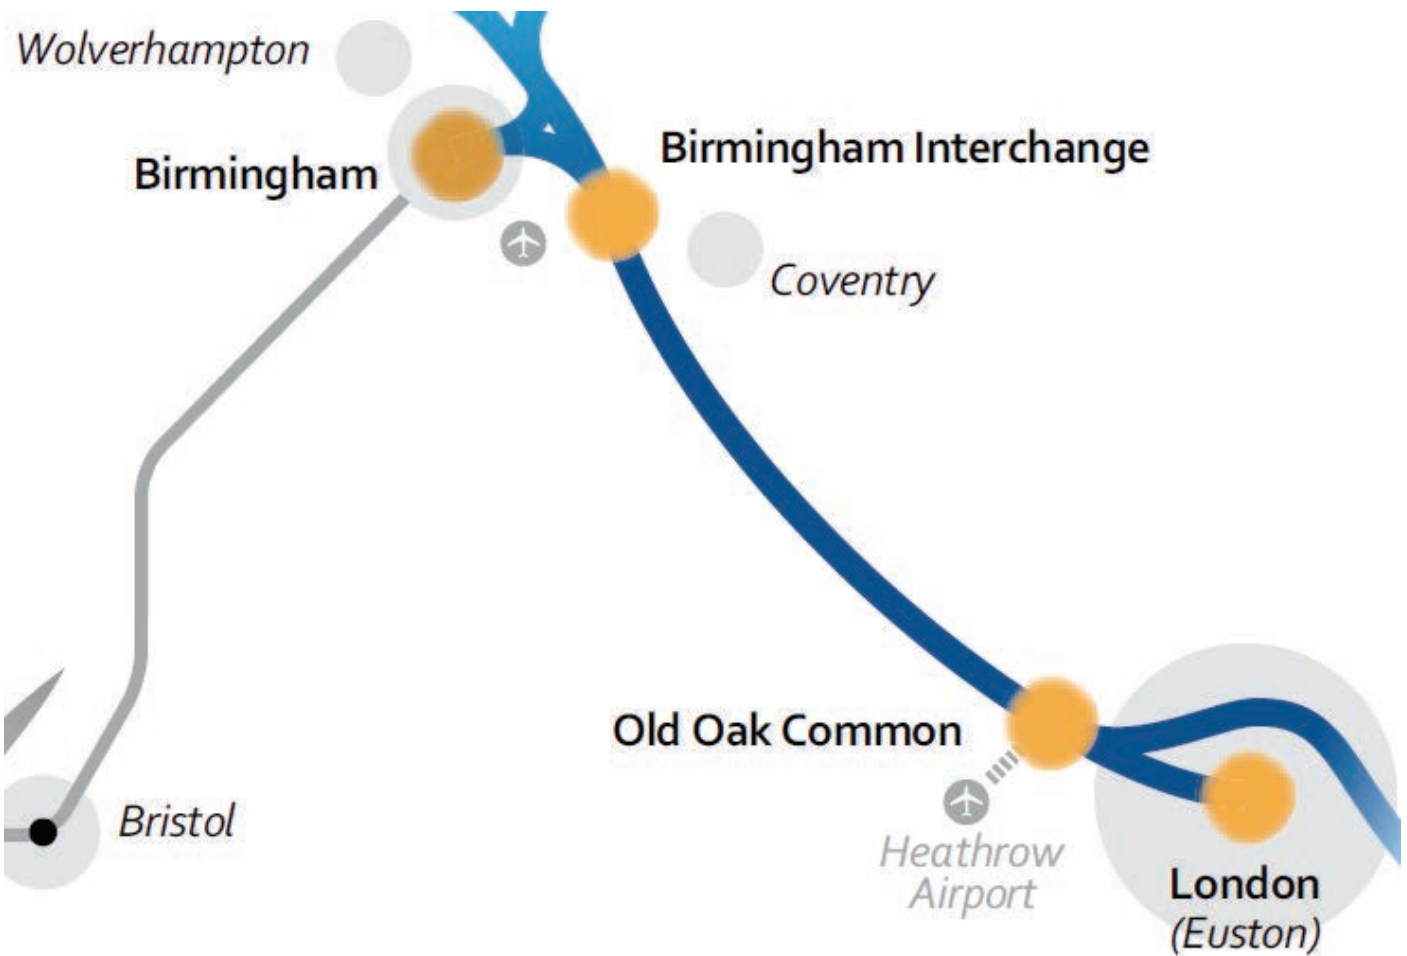

If the planned High Speed 2 line is built, then trains from London will return to Curzon Street station by 2026. The proposed journey time of 49 minutes would represent a time saving of 85% in the 185 years since trains started running [our pages 2 and 5].

The Banality of Evil— to publish or not to publish?

Albert Isaacs, Brendan Whyte and Geoff Lambert

This letter is much more serious than most things that appear in hobbyist magazines such as this, dealing as it does with a significant moral issue. However, my letter is motivated by the sombre theme of the November 2013 edition of The Times, that is War, and in particular by the preamble to the article, “A Timetable of the Third Reich”, on page six.

In his introduction to the above article, Geoff Lambert explains that the Sydney Convenor of the ATTA, Geoffrey Clifton, recently appeared on ABC local radio in Sydney to talk about the hobby side of timetables. Another interviewee on the same program was Simon Longstaff, Executive Director of the St James Ethics Centre. Over coffee in the Green Room, Simon asked Geoffrey the following hypothetical question: “What would AATTC (sic – then the current name of the ATTA) do if someone offered it a timetable showing trains of the Holocaust in WWII?”. Geoff Lambert concludes the paragraph, thus: “Geoffrey said as I am sure we all would – we would reject it and ask the donor to send it to a Holocaust Museum”.

Despite Geoff’s assumption, my answer would be the complete opposite – I would accept the timetable on behalf of the ATTA! To explain why, I ask the following question: Why have Holocaust Museums been set up right across the planet? I venture to suggest that they exist within the spirit of the well-known George Santayana quote: “Those who cannot remember the past are condemned to repeat it”. In other words, the primary function of a Holocaust Museum is to remind or teach people what has happened in the past, and to hark back to the catch cry of the immediate post-war era: “Never Again!”

I would further suggest that it is duty of every decent human being to also remind other people of the horrors of the past. Therefore, it should also be the responsibility of organisations like the ATTA to preserve remnants of past terrors (should they be given the opportunity) and of thus maintaining documents that show past human errors! Yes, it is good that Holocaust Museums do their job so well, but not everyone visits such places and therefore, when other organisations are given similar opportunities, they should accept this responsibility. This does not mean that they cannot concurrently record their revulsion. (Yes, I do know that in the case

of the ATTA the proposition is purely hypothetical.)

We should also remind ourselves that despite the sterling efforts of Holocaust Museums and similar agencies, their excellent work often seems to be of little or no avail. I am not only referring to people like the Holocaust Deniers; I am also thinking of all the attempted holocausts that have occurred since the cry went up: Never Again!” I am thinking of Cambodia, of Rwanda, of Serbia, of Croatia, of Timor Leste, of Sri Lanka, of Syria ... sadly the list goes on ... there are many others that I haven’t listed!

To return to the original question, perhaps I would even go as far as publishing a copy of a timetable showing long trains of cattle-trucks taking their human cargo to their ultimate destiny in the gas chambers. By doing so, perhaps I may cause some people to ponder on this serious moral question.

In conclusion, The Times article doesn’t tell us how ethicist Simon Longstaff responded to Geoffrey Clifton’s response to his question – I would love to know Simon’s reply!

-Albert Isaacs

The November War issue is great. I love the huge Reichslokomotives. I have a French graphic novel in which the artist envisioned likewise massive locos pulling mile-long trains.

However, I don’t understand your comment in the 3rd Reich timetable article:

...I am sure we all would: we would reject it and ask the donor to send it to a Holocaust museum”.

Why? While as a librarian I appreciate offers of material to the library, If offered an interesting item in my personal capacity, I would keep it if I liked it, and pass it on myself to ensure it found an appropriate home.

I also don’t understand your comment:

“My especial fear was that this timetable would indeed give details of Holocaust trains. Lucky for me it did not. ... This is why I feel I can review it here”

Why was interesting historical information a ‘fear’? Why would you *not* analyse/review an historically important timetable in The Times???

The way I read it, you are self-censoring out of some political correctness, which I just don’t understand. Can you please explain why you appear to not want to discuss certain timetables in a journal of timetables?

-Brendan Whyte

My principal reason for being reluctant to publish a Holocaust railway timetable is related to the ideas related to the phrase “The Banality of Evil”. This was part of the title of a book written in 1963, about the trial of Adolf Eichmann. The author of this book attempted to excuse the actions of Eichmann by arguing that he was not evil in the sense that Hitler was evil- he was just following evil orders. This book caused a great furore. The counter argument – that Eichmann knew what he was doing and agreed with it was argued forcefully in scores of publications.

When I faced this dilemma (or, more correctly when I thought I was going to face this dilemma), I considered how we should view the timetable compilers and the train operators for Holocaust trains. They could hardly be unaware of what they were doing, but they went ahead and did it anyway. From the point of view of a timetable analyst, it seemed to me that to study and dissect the technical details of such timetables would, in some way, “whitewashing” what was going on. I thought it would be like discussing the chemistry of the Gas Chambers in a purely scientific manner (I am a chemist by training).

Had the timetable turned out to be what I feared, I would have forwarded it first to a Holocaust museum and asked for advice on how to proceed.

I should also say that, in trying to resolve my potential dilemma, I made a diligent search on the Internet for such timetables. There was nothing. There could have been two reasons for this- there never were any such timetables or that they existed, but that no one had considered that they could be reproduced or discussed in a way that did not appear to “dignify” such timetables.

I wrote to Simon Longstaff asking for his comments but, at the time of going to press, had not received a reply.

-Geoff Lambert

The demise of country race trains in W.A.

By DAVID WHITEFORD

NINETEEN FIFTY ONE SAW the end of W.A. Government Railways special trains from Perth to country horse race meetings.

Horse racing, apart from being a popular business and pastime throughout Australia, was an income earner for the government railway systems. Western Australia had a few race course branch lines (Belmont, Coolgardie, Bunbury, Helena Vale and Canning Park) and special stations for other courses (Belmont Park / Goodwood, Northam, York, Geraldton and Toodyay). Race trains to other towns could be authorised to stop for passengers at designated points that were not recognised stations (for example the racecourse near Nabawa on the Yuna branch). For many years, timetable alterations and/or additional trains were provided for race meetings throughout the WAGR system. By the 1950s only 6 race courses outside Perth were served by trains and there were no local trains such as from Geraldton to Nabawa or Kalgoorlie to Coolgardie. York and Northam were the only remaining racecourse stations outside the metropolitan area.

In 1950, the last year of all-train services to race meetings, there were 8 services from Perth to Bunbury; 5 to Pinjarra; 8 to Northam; 6 to York; 1 to Toodyay; and there were 2 extra overnight sleepers from Perth for the Kalgoorlie-Boulder Racing Carnival (22/8 - 3/9) and one return. Other than Kalgoorlie the race specials were combined horse and passenger trains. Horse boxes were loaded at both South Beach (near Fremantle) and Belmont, and they were worked to Perth or Bayswater as appropriate, with the train from Fremantle usually forming the race special from Perth. For trains to Bunbury and Pinjarra horses were also loaded while the race special sat at Rivervale station although on return trains an unloading stop was not provided. I presume those horses were railed to Belmont. The trains to all courses could also pick up passengers and horses at any station or siding *en route*. Most country race meetings were held on Wednesday.

At first, 1951 saw traditional horse and passenger race trains but by the end of the year road buses had taken over all specials except the overnight Kalgoorlie-Boulder trains; horse boxes were no longer conveyed to the country meets. The first country race meeting served by the WAGR in 1951 was Bunbury on 10 January with a horse/passenger train leaving Perth at 7.20am. Only three Bunbury race meetings were served that year and the next, on 14

November, was by bus.

The first road bus special to a country race meeting was that to York on 27 June 1951. Two 'traditional' race trains had run on 9 & 14 May. The 27 June was a combined race / trot day with morning and afternoon bus departures from Perth, but the next 3

York meetings were served by 'Diesel Trains', the ADF class 'Wildflower' diesel power unit and coaches. These were on 25 July, 15 August and 5 September. The meet of 24 October was to be served by a diesel train but this was changed to bus. Two were run- for races during the day, and

trots in the evening.

Pinjarra had four 'traditional' services then three bus services for the remainder of the year. Northam also had four 'traditional' trains, then one diesel train and no further services for the year. Toodyay only saw one WAGR service, a diesel train on 19 September, while the Kalgoorlie-Boulder carnival (23/8 - 2/9) again had two extra overnight trains from Perth and one return.

1952 was an all-bus year, with no special train (or bus) to Kalgoorlie. However the buses had enabled the WAGR to broaden their services with Goomalling trots (13/3) and Beverley races (30/4 & 11/6) being added to the programme. There had also been a bus for the Harvey trotting meeting on 5 December 1951 but there was no 1952 service. Pinjarra had buses on 6 days, Bunbury 7, Northam 5, Toodyay 1, York 8. For York, five of these were combined racing and trotting days and buses were run in each direction to and from the respective grounds for the day and evening meets. Buses were also given the flexibility of departing the race meeting '20 minutes after the last race was completed' should it be running late. Although not stated in the Weekly Notices, presumably the race trains would not leave strictly to time if the meeting was running late.

How do the train and bus schedules compare?

BUNBURY 10/1/1951

combined horse / passenger train.

Horse box trains left Belmont at 6.30am and South Beach 5.55am for Perth with the race train leaving Perth at 7.20am. A 15 minute stop at Rivervale for loading horses was made 7.35 - 7.50am, and Bunbury arrival was 12.30pm. A refreshment stop was made in Pinjarra.

Bunbury departure was 5.50pm, arrival in Perth 10.10pm with horse box specials to South Beach (arrive 11.05pm) and Belmont (10.47pm). No unloading stop was made at Rivervale and there was a Pinjarra refreshment stop.

14/11/1951 Bus.

Perth departure 9.15am, Bunbury racecourse arrive 1.10pm, depart 5.05pm - Perth arrive 9.00pm. The bus also had a 10 minute refreshment stop in Pinjarra in each direction.

Train - 5 hours 10 minutes; bus 3 hours 55 minutes - with the bus going direct to the course but the train to the Bunbury station, a few km from the course.

PINJARRA 17/1/1951

Horse box trains left Belmont at 9.35am and South Beach 8.33am with the race train leaving Perth at 10.15am, Rivervale loading stop 10.25-10.40, Pinjarra ar-

YORK RACES, WEDNESDAY, AUGUST 15.—The following special arrangements will apply:—Diesel train stopping to pick up and set down passengers as required will run as follows: R1 Perth dep. 10.35 a.m., Midland Junction 10.55, Chidlow 11.35, Spencers Brook arr. 12.35 p.m. Refreshments. Dep. 12.45 p.m., Racecourse arr. 1.20, dep. 1.30, York arr. 1.35.

Return Journey.—R2 York dep. 4.20 p.m., Racecourse arr. 4.25, dep. 4.45, Burgess 4.58, Spencers Brook 5.18, Chidlow arr. 6.24, dep. 6.34, Midland Junction arr. 7.8, dep. 7.10, Perth arr. 7.30 p.m.

E.R. and G.S.R., Alteration.—No. 24 goods will be altered to dep. York at 7.35 p.m., Midland Junction arr. 2.20 a.m. Thursday.

E.R., Addition.—No. 141 goods Midland Junction-Koojeddah and return.

Cancellation.—No. 89 goods Midland Junction-Koojeddah.

All goods trains to be worked clear.

No. 372 passenger to follow R2 ex Bellevue.

District Loco. Superintendent, East Perth, provide diesel train and driver.

Station-master, Perth, supply guard.

Return of bookings to be submitted to Transport, Perth.

KALGOORLIE AND BOULDER RACING CARNIVAL.—In connection with the above events, the following special train arrangements will apply:—

Thursday, August 23.

E.R. and E.G.R.—Alteration.—No. 85 passenger (5.0 p.m. Perth to Kalgoorlie will convey sit up passengers for stations Booraan to Kalgoorlie and Esperance and Leonora branches. Sleeping berth accommodation to be restricted to one 1st and one 2nd class car conveying sleeping berth passengers for stations short of Kalgoorlie and Esperance and Leonora branches.

Addition.—Special passenger train conveying sleeping berth passengers only for Kalgoorlie to depart Perth 8.10 p.m. running on table of No. 83 Westland. Train to be composed of three 1st and three 2nd class sleeping cars and must not exceed Westland load.

Monday, August 27.

E.R. and E.G.R.—Alteration and Addition.—No. 85 passenger (5.0 p.m.) Perth to Kalgoorlie will convey sit up and sleeping berth passengers for Esperance and Leonora Branches, also sleeping berth passengers for Kalgoorlie only.

No. 87 fast goods (6.10 p.m.) Perth to Merredin will run as a passenger train and be extended to Kalgoorlie, Merredin dep. 2.55 a.m., Bodallin 4.45, Moorine Rock 5.34, Southern Cross arr. 6.0, dep. 6.35, Yellowdine arr. 7.30, dep. 7.35, Duri cross No. 92, dep. 8.55, Woolgangie 9.45, Coolgardie arr. 11.15, dep. 11.20, Kalgoorlie arr. 12.15 p.m., conveying sit up and sleeping berth passengers for all stations Booraan to Kalgoorlie.

Sunday, September 2.

Addition.—No. 80 passenger, Kalgoorlie dep. 7.30 p.m., Coolgardie 8.30, Bulla Bulling 9.15, Woolgangie 9.59, Duri 10.53, Karalee cross No. 97, to wait, dep. 11.40, Yellowdine arr. 12.5 a.m., Monday dep. 12.20, Southern Cross arr. 1.10, dep. 1.45, Moorine Rock 2.20, Bodallin arr. 3.0, dep. 3.5, Merredin arr. 4.35, dep. 4.55, Baandee cross No. 77, dep. 5.45, Kellerberrin arr. 6.15, dep. 6.30, Cunderdin arr. 7.35, dep. 7.50, Meckering cross No. 97, to wait, dep. 8.25, Northam arr. 9.10, dep. 9.20, Chidlow arr. 10.51, dep. 11.0, Midland Junction dep. 11.44, Perth arr. 12.10 p.m.

No. 80 to convey sleeping berth passengers only.

Transport Perth and District Traffic Superintendents, Northam and Merredin to arrange balancing services.

rive 1.05pm, depart 5.15pm, Perth arrive 7.45pm. Horse boxes to South Beach departed Perth at 8pm (arrive 8.47) and Belmont also at 8pm (arrive 8.20).

21/11/1951 Bus.

Perth depart 11.30am - Pinjarra arr 1.15pm, depart 5.05pm - Perth arrive 6.50pm.

Train - 2 hours 50 minutes; bus 1 hour 45 minutes. The race course is adjacent to the railway yards.

NORTHAM 4/4/1951

Horse box trains left Belmont at 9.45am for Bayswater and South Beach at 8.10am for Perth. The race train left Perth at 10.02 am, stopping at Bayswater to attach horse boxes 10.11 - 10.19am, and arriving Northam Racecourse 1.15pm. Departure was 4.50pm, stopping in Bayswater to detach horse boxes 7.45-7.55pm and arriving Perth 8.05pm. South Beach horse boxes arrived there at 9.17pm while the Belmont boxes had had, according to the Weekly Notice, a one minute journey from

Bayswater to Belmont arriving there at 7.51 after leaving Bayswater at 7.50.

There was a refreshment stop timed in Chidlow.

8/8/1951 Diesel Train

Perth depart 10.50am – Northam Racecourse arrive 1.45pm, depart 4.50pm, Perth arrive 7.30pm. A refresh. stop was made at Spencers Brook on the outward journey and Chidlow on the return.

2/4/1952 Bus.

Perth depart 11.00am – Northam Racecourse arrive 1.10pm, depart 5.00pm, Perth arrive 7.10. There were no refreshment stops.

Train – 3 hours 13 minutes; Diesel train – 2 hours 55 minutes; bus 2 hours 10 minutes.

YORK 9/5/1951.

Horses left South Beach at 7.48am and Belmont (for Bayswater) at 9.15. The race train left Perth at 9.28am, Bayswater 9.37- 9.45, York Racecourse arrive 1.15pm, depart 4.15pm, Bayswater 9.00-9.10pm, Perth arrive 9.20pm. Horse boxes reached South Beach at 10.27pm and Belmont at 9.20pm – following a 10 minute journey from Bayswater! Refreshment stops were made at Spencers Brook in both directions.

25/7/1951 Diesel Train.

Perth depart 10.35am – York Racecourse arr 1.20pm, depart 4.25pm – Perth arrive 7.30pm.

27/6/1951 Bus

Races - Perth depart 11.00am – York arrive 1.05pm, depart 4.50pm – Perth arrive 6.50pm.

Trots – Perth depart 5.00pm – York arrive 7.10pm, depart 10.55am – Perth arrive 12.55am.

There were refreshment stops at The Lakes on the outward journeys only.

Train – 3 hours 47 minutes; Diesel train 2 hours 45 minutes; bus 2 hours 5 minutes.

TOODYAY 13/9/1950.

Horses left South Beach at 7.48am and Belmont (for Bayswater) 9.13am. The race train left Perth at 9.30am, Bayswater 9.40-9.49, Toodyay 1.15pm; depart 5.30pm, Bayswater 8.58-9.10pm, Perth arrive 9.20pm. South Beach horse boxes arrived there at 10.27pm and Belmont at 9.10pm. Although Toodyay racecourse had had its own station it was long out of use by the 1950s.

BUNBURY RACE MEETING—Wednesday, December 5, 1951:—Special Road Bus Service will run as tabled hereunder:—

Perth Station dep. 9.15 a.m., Armadale (through) 10.0 a.m. Pinjarra (Refreshment Rooms) arr. 11.0 a.m., dep. 11.10 a.m., Waroona dep. 11a38 a.m., Harvey turn off dep. 12a10 p.m., Brunswick Junction dep. 12a35 p.m., Race Course arr. 1.10 p.m.

Race Course dep. 5.5 p.m.* Brunswick Junction dep. 5a40 p.m., Harvey turn-off dep. 6a5 p.m., Waroona dep. 6a37 p.m., Pinjarra Refreshment Rooms arr. 7a5 p.m., dep. 7a15 p.m. Armadale (through) 8.15 p.m., Perth Station arr. 9.0 p.m.

(* or 20 minutes after finish of last race) .

Route.—via Main Road throughout.

Fare.—36s. 9d. return.

Reservation of Seats.—Compulsory and bookings open at Perth Sleeper Office.

HARVEY TROTting MEETING—Wednesday, December 5, 1951:—Special Road Bus Service will run as tabled hereunder:—

Perth Station dep. 4.25 p.m., Harvey arr. 7.0 p.m.

Harvey dep. 10.20 p.m.,* Perth Station arr. 12.55 a.m., Thursday.

(* or 20 minutes after finish of last race).

Route.—via Main Road.

Fare.—27s. 3d. return.

Reservation of Seats.—Compulsory and bookings open at Perth Sleeper Office.

ADDITIONAL WESTLAND EXPRESS, SUNDAY, DECEMBER 2, 1951.—No. 83 8.10 p.m. Perth to Kalgoorlie will run crossing No. 86 passenger at Merredin, thence 15 minutes later than tabled to Kalgoorlie. Composition 3 AZ, 3 ARS, 1 AYL.

19/9/1951 Diesel Train

Perth depart 10.45am – Toodyay arrive 1pm, depart 5pm – Perth arrive 7.30pm.

21/5/1952 Bus

Perth depart 11.00am – Toodyay racecourse arrive 1.20pm, depart 5.00pm – Perth arrive 7.20pm (Refresh stop at The Lakes forward journey only). Train – 3 hours 45 minutes; Diesel train 2 hours 15 minutes; Bus 2 hours 20 minutes.

Conclusion

With the exception of Toodyay, the bus services were far quicker than any of the rail services, and the Toodyay buses used the longer road route via Great Eastern Highway and Clackline rather than the Red Hill route that new WAGR road bus services would commence using within 2 years. The 'traditional' trains also resulted in a lot of light engine and empty stock workings, often required bank engines, and some signal boxes were switched in specifically for the race specials. The total running costs for one train would, by the 1950s, quite possibly exceed the income. While consists were not always mentioned, it appears that the Northam and York trains were standardised by then with one AD coach from Fremantle and two lavatory side door carriages from Perth in addition to however many horse boxes were provided. This was not a large passenger consist, despite the requirement for bank engines from Midland Junction to Koojeda.

Bunbury consists were not recorded but a U class steam locomotive was required. A Ds tank engine hauled Pinjarra trains and a P class those to Toodyay.

Finally, the Kalgoorlie – Boulder Racing Carnival. On Thursday 23 August 1951 an additional sleeper, Kalgoorlie passengers only, train was run overnight from Perth and #87 fast goods from Perth to Merredin on Monday 27 August was altered to run as a sleeping berth-only passenger train to Kalgoorlie. There was an overnight sleeper -only return extra on Sunday 2 September.

While the continuity of trains to country race meetings had ended, during the heyday of the Hotham Valley Tourist Railway in the 1980s and 1990s, special trains were once again run from Perth to some country towns for race days, including stopping at the former Northam Racecourse station site. Special trains are no longer run on the former WAGR system either by preservation groups or by the contracted rail operators.

As an aside, the end of race trains did not mean the end of the Northam Racecourse station. It remained in working timetables until 1967 when Weekly Notice 28 announced its 'elimination' from 24 July. However it was again 'eliminated', this time from 23 December 1968, in W/N 50 of 1968. The station had been a request passenger stop for timetabled services for most of its existence and also available for goods traffic.

Anatomy of an employee timetable

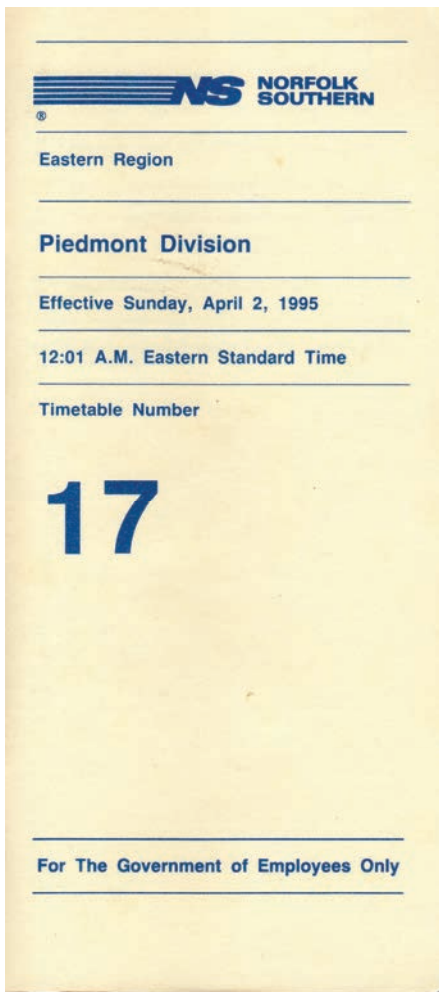

STEVE PARIS <http://www.rrpaper.com/>

Many people are familiar with railroad passenger timetables. If not the exact layout and information contained therein, they would be familiar with the concept that the trains stop at a certain place and at an appointed time to take on and let off paying passengers. When I hired on with the N&W, I discovered employee timetables. I had no idea of all the information they contained. I am sure you have found that it is far more difficult to obtain these timetables first hand than it used to be. This is because there are many fewer active railroaders and, with the wholesale closure of depots and towers, there are fewer opportunities for the public in general and rail fans in particular to interact with railroad personal.

This might be an opportune time to examine the anatomy of a railroad employee timetable. I have chosen a Norfolk Southern Piedmont division timetable from the 1990's as an example.

Following the merger of the Southern Railway and Norfolk & Western in 1981, the newly formed Norfolk Southern took on

Capacity of Tracks	MILE POST	STATIONS	SPECIAL INSTRUCTIONS

	327.4	Duke																
	333.3	Y. Salisbury																

the timetable format of the N&W for reasons unknown to me. They measured 4 1/2" x 9 1/2" and stapled. Not loose leaf as the Operating and Safety Rulebooks. Prominent on the cover is region and division name, date and time of issue and timetable number. Note that nothing on the railroad ever happens at exactly noon or midnight. It is always 12:01PM or 12:01AM. This eliminates a possible point of confusion. The N&W/NS maintained the same beige cover but changed the cover color print with each new issue to ensure expired timetables would stand out and not be used.

The station pages, probably the most familiar of a timetable, have changed greatly over the years. In addition to the location (no longer depot) names, mile posts and sidings, timetables from an earlier time contained the arrival, departure and meeting times of first, second and third class trains. Those were the days of schedules and train orders as well as agents, operators, depots and towers located every few miles along the line before radios, centralized traffic control and track warrants.

As you can see, the station pages are simpler. These pages cover the mainline from

Lynchburg, VA south to Salisbury, NC and Salisbury to Greenville, SC. The layout is pretty straight forward with columns for capacity of sidetracks, mile posts, stations, tracks & signals, interlockings, railroad crossings and finally number of miles from Washington Union Station. This was all double track at one time but as the number of trains decreased, large sections of the second main track were removed leaving alternating double and single-track. The "Y" next to some stations signifies the presence of a wye track where locomotives and cars can be turned. The "DN" denotes an operator on duty 24/7 (Day/Night). The next column designates this is Traffic Control / Remote Control territory. One line is single track and two lines for double track. There is only one interlocking and railroad crossing which is located at Graham, NC, MP377.1. In the Special instructions section you find this has controlled signals (not automatic) and the CSX is the crossing railroad.

Amtrak schedules are included only for information and guidance of employees. They do not grant schedule rights or superiority to the trains.

One of the critical elements in every employee timetable are the speed limits. These pages show some of the system wide General Speed Restrictions on specific cars, locomotives and trains. On the

9-a. SPEED RESTRICTIONS
General Speed Restrictions

CONDITIONS	MAXIMUM Miles Per Hour All Trains and Engines
CARS	
Trains handling more than 40 empty multi-levels unless handled as solid block on the car of train (up to 70 empty multi-levels) or in solid train (up to 150 empty multi-levels)	25
Trains handling more than 40 OTTX flat cars either loaded or empty	30
PRR (or PC or CR) short gons in series 13000-15999 and 500000-502920, loaded	30
empty	35
Short ore hopper cars (35' or less): DM&R, loaded	40
empty	45
Other, loaded	30
empty	35
Trains handling empty bulkhead flat cars and/or empty woodrack cars, foreign or system	45
EXCEPTION: Restriction does not apply to center beam flat cars.	
Southern log cars series 118000 - 118039 when empty	45
Trains handling flat cars loaded with creosoted poles	45
LOCOMOTIVES	
Controlling locomotive not equipped with speed indicator	20
Single light locomotive	30
All steam locomotives	40
All other light locomotive consists of 2 or more units	50
TRAINS	
Key Trains (See Sect. 17)	50
Loaded Welded Rail Trains	50
All other trains	50
Trains consisting entirely of Triple Crown, TOFC/COFC, Multi-level, or Stack equipment will be governed by passenger train speed on curves and turnouts not to exceed	60
When freight trains handling one or more loaded cars are operated on jointed rail, the engineer will avoid prolonged operation in speed range of 16 to 21 mph. If speed cannot be maintained above 21 mph, it must be reduced to 15 mph.	
Passenger Trains	79
OTHER	
FRA T-10	50
Shov plow NW 590000, when plowing	25
Shoving movements with NS31 on leading end	25
Single unit of self-propelled work equipment that is designed to shunt track circuits (i.e. Sperry Rail Test cars, Loram railgrinder and ballast cleaner)	30
Lucky Loader, NW 14317 loaded on gon NW 59802	35

60

9-b. SPEED RESTRICTIONS BY DISTRICT
Except where authorized by timetable or special instructions, speed on siding must not exceed 10 MPH.

Maximum speeds through turnouts listed below govern all trains. When moving in accordance with Rule 304 (Diverging Route Clear), a train must approach these turnouts not exceeding the speed authorized for that turnout.

WASHINGTON DISTRICT

BETWEEN AF TOWER AND MONROE (M.P. 165.1)

Passenger trains	79 MPH
Rail Highway trains	60 MPH
Freight trains	50 MPH

Except limit speed between AF Tower and Monroe as follows:
On Horn Track and through turnout connecting Horn Track to No. 2 main track at CR Tower (M.P. 10.7) 35 MPH

Through turnout between south freight track and No. 2 main track at M.P. 10.5 25 MPH

Maximum authorized speed on the Manassas Wye tracks 10 MPH

Track #2, M.P. 67.3 to M.P. 68.0 35 MPH

THROUGH TURNOUTS

quality, highly accurate railroad approved timepiece. My 30 year old Pulsar wristwatch still runs like a champ. These pages list the approved watches and the location and hours of open agencies. Even though the small town depots are gone, there are still agents on duty at the larger yards.

Railroaders are required to know the signal names and indications by heart. Their lives depend on it. Just in case, though, the signals for their division are included in the timetable as well as the Operating Rulebook. It's surprising the number ways signals can display "Stop".

And finally, the back cover. It's the same colors as the front. The diagonal stripes are for better visibility. This size timetable fits easily in a pocket and can be used for hand signals.

I have touched on some of the highlights of an employee timetable but there are, of course, a whole wealth of additional information to be found in an employee timetable. They are all there for a reason: to ensure the safe and efficient operation of the rail lines.

Timetables, like most everything in life, have changed over the years. The central focus of a typical railroad employee timetable are the station pages. In general, they listed the stations and depots along a line of road. Speed limits, signal rules, special instructions, etc. were found in their own

right hand page are the speed restrictions by district, starting with the Washington District between AF Tower and Monroe, VA. It starts with overall speed limit for passenger, Rail Highway and freight trains, then proceeds to speed restrictions specific turnouts and curves.

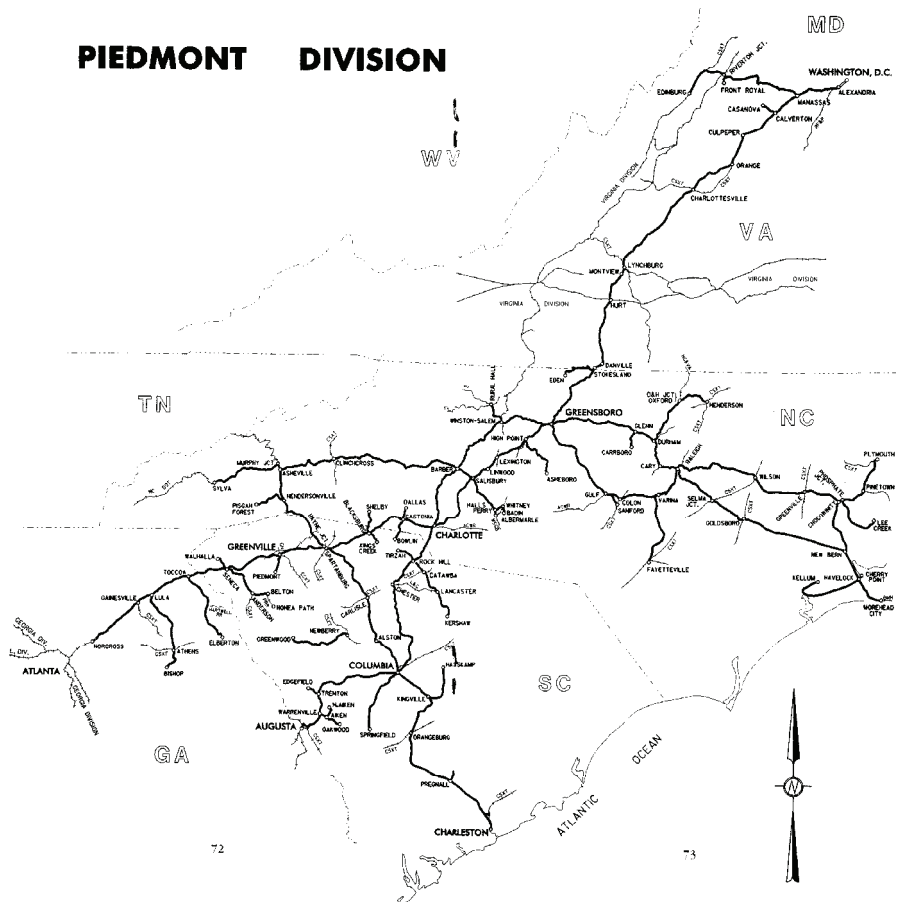

One of my favorite parts of a timetable is the map. Not all timetables have them but it is good to match up the station pages to where they actually fit in with the rest of the railroad. The Piedmont division has grown considerably since the merger and now includes the former Eastern and Carolina divisions. This one division includes many of the much smaller Southern Railway divisions. The map is located at the centerfold.

The next scan shows the tonnage ratings of 4 groups of similar sized locomotives between pairs for cities. It also shows line segments where six axle engines are prohibited.

Not everybody is a rail fan and knows the different locomotive makes and models so Norfolk Southern includes a complete roster of their locomotives by road number and model.

Even in this modern technological age, certain aspects of railroading remain constant. One is the requirement of a high

These ratings are for single units and will be increased in proportion to the number of units in multiple service. If a unit fails, tonnage will be reduced in proportion to the number of units in operation, and an allowance of 150 tons made for each inoperative unit handled.

These ratings are based on maximum grades and can be increased over certain parts of the line, when necessary. When engines will not handle their rating, a report must be made to the Chief Dispatcher by the Engineer, conductor will make written report to Trainmaster.

In making computations, less than 1,000 pounds will be dropped. 1,000 pounds will be counted as a ton.

A GP-40 and slug combination is rated at 90,500 lbs. maximum continuous traction effort and will be rated the same as a standard 6-axle unit (SD40-2, C30-7) when used in road service.

sections elsewhere in the timetable. For more a in-depth discussion, see the "Anatomy of a timetable" page. The layout, size and information shown on station pages vary from railroad to railroad. As an example of the changes taken place over time, I have selected the former Atlantic Coast Line main line southbound from Rocky Mount, NC to Florence, SC.

Atlantic Coast Line Northern Division Supplement #1 to Time Table #2, dated July 25, 1936: Size: 9" x 10 3/8"[above]

This line has always been heavy in passenger trains, mainly from the northeast to Florida. You can see that there are 4 through passenger trains: The Tamiami, Coast Line Florida Mail, Havana Special and Palmetto Limited. There are also trains

to and from Wilmington, NC (the ACL headquarters) which connect to the mainline at Contentnea, NC and Pee Dee, SC. There is even a mixed train originating at Fayetteville heading down the Bennettsville Branch. Only two freight trains are scheduled, although there were surely extras.

Atlantic Coast Line Northern Division #4 December 17, 1953
Size: 9" x 10 3/8" [above]

This is from the hey day of the Florida passenger trade. Traffic has grown to 9 through trains, most of which are in the middle of the

night and make no stops. There are still trains going to and from Wilmington. A new column has been added to show mile posts (miles from Richmond, VA). On the opposite page (not shown) are the schedules for 6 Third Class Through Freight trains and 4 Fourth Class Local Freight trains.

Seaboard Coast Line Rocky Mount and Raleigh Divisions #6 October 25, 1981 Size: 8 1/2" x 8 1/2" unfolded

1981, the era of Amtrak. As a testament to the heavy traffic between the northeast and Florida, Amtrak is still fielding two trains on this line with one more on the parallel former Seaboard Air Line through Raleigh, NC and Columbia, SC. The format is basically the same but the actual milepost locations have replaced the miles from Rocky

Mount.

CSX Florence Division #6 July 1, 2010
Size: 8 1/2" x 11"

Fast forward to a more recent example. As you can see, this is not your father's station page. Much more information has been consolidated on this page. In one glance, you can see there is now a track diagram / schematic. Station names are still listed with mile posts. It is easy to see what the speed limit and signal system (authorization to move) is for each mile of road. With all this information, the line from Rocky Mount to Florence is now spread over six pages plus there are six more pages of South End Subdivision Special Instructions.
