The foregoing Time Table is subject to alteration, especially as regards the departure dates in and after August.

### Bradshaw's International Air Guide, No. 1, 1934

by Victor Isaacs

RADSHAW'S RAILWAY GUIDES to Britain are well known. So too is Bradshaw's Continental Railway Timetable.

Bradshaw also published an International Air Guide. The first edition was published in November 1934. The style is amazingly similar to the Bradshaw Rail Guides. This first edition is very evocative of another age of travel, and, in particular of the very early period of development of air travel [cover and title page, right].

A large proportion of the timetables in the first edition are merely "skeleton" timetables, that is, they give the names and mileages of the ports, but no services are shown. Instead a sub-heading says "Service suspended during Winter". This reflects the then low demand for air travel, which in 1934 was very expensive and in a period of immense financial stress. It equally reflects the early development of aviation when aircraft were not so sturdy for a European winter. However, one must therefore wonder about the motives of the Bradshaw Company in publishing their first edition of the Air Guide right at the start of the Northern Winter. Perhaps this was a deliberate ploy to ease themselves gradually into the compilation of the timetable.

The Guide – as one would expect in a British production – has a comprehensive coverage of aviation services in Britain. It has what appears to be comprehensive coverage of services on the continent of Europe. There are some services across the Mediterranean to North Africa. There are only five intercontinental services - three to the Far East, one to Africa and one across the South Atlantic to South America by Zeppelin. There are no services shown across the North Atlantic, because there then were none. In the period there were many air services within North America, but this area is completely ignored in the inaugural edition of Bradshaw's Air Guide. There are also no internal African services (with one small exception), no South or Central American or Caribbean services and no Australasian services whatsoev-

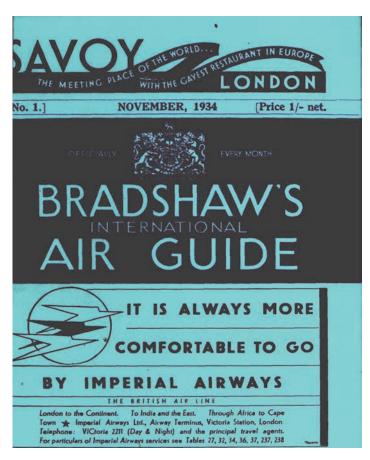

The Guide contains a number of advertisements, mostly for hotels, of which most are in Britain.

After the index, there is a section entitled "Information for Travellers". One paragraph reads:

#### "Personal Hints

The cabins of the air-liners are enclosed and heated, therefore no special clothing is required, similar clothing to that worn for rail or boat travel being sufficient."

The first tables show the internal UK services of Railway Air Services. This is the air company established jointly by the four big mainline railway companies. It mainly concentrated on where water impeded or prevented railway travel, such as across the Severn River estuary from SW England to Wales, to the Isle of Wight, and, in particular to Northern Ire-

5,,

land. Many of the Town Termini for Railway Air Services were at mainline railway stations. Railway Air Services is one of the corporate predecessors of today's British Airways.

The Guide's first timetable (below left) shows RAS' service from London to Liverpool to Belfast. Manchester and Glasgow are also included in the table but with no services shown against these places. There was one plane a day on weekdays only.

The next three tables in theory showed more RAS services, but in fact all tables are empty as services were "Suspended during Winter". Tables 2 & 3: "Empty" RAS timetables are shown below, right.

Tables 10 and 11 (top of page 5- Table 11 has been rotated) were of services by Jersey Airways to the Channel Island of Jersey. What is unique about these is that the service varied day by day.

From timetable no. 27 the Guide moved on to "Continental Services". There were three operators on the London-Paris route, the most shown for any route. These were Imperial Airways, Air France and Hillman's Airways. However, there was still a total service on weekdays of only seven flights between them – fewer on weekends. Our page 6 shows some of the services across the Channel / La Manche

Railway Air Services DH.89 Dragon Rapide G-ACPR at Manchester (Ringway) Airport in 1938
Railway Air Services (RAS) was a British airline formed in March 1934 by four railway companies and Imperial Airways. The airline was a domestic airline operating routes within the United Kingdom linking up with Imperial's services. The railways were the "big four": London Midland & Scottish, London & North Eastern, Great Western Railway and Southern Railway.

KLM of the Netherlands just edges out Qantas as the oldest airline in the world. Its services in this Guide even includes flights (three a day) between Amsterdam and Rotterdam, against a frequent trains service and of a mere 35 miles! The KLM Amsterdam-Rotterdam flights appear in Table 90, on our page 7.

**To Saarbrucken Airport by Tram.** The most prolific operator in Europe is DLH, that is Deutsche Lufthansa. In Saarbrucken and also in Bremen the connection from its Town Terminus to the Airport is shown as being by Tram! This service is shown in Table 115 and appears on our page 8.

The Italians seem to have been particularly keen to connect their possessions – some contentiously obtained after the Great War - by air services. Our page 9 shows Italian air services across the Adriatic Sea (Table 187). On the opposite page are interesting

early services in Eastern Europe.

Now, to what is perhaps more interesting: the genesis of intercontinental air services. The first such timetable shown is of Imperial Airways' service from Britain to South Africa (Table 237 shown in the top half of our page 10). It operated just once a week. It travelled via France and Italy before flying across Africa. There were no night flights. What appears most peculiar to me is that the first night outbound, or last night homebound, was in fact spent on the train from Paris to Brindisi or vice versa. After that overnight halts were made at Cairo, Juba, Nairobi, Mbeya, Salisbury and Johannesburg. The full journey took nine

days. Imperial Airways' Africa service had commenced in April 1932.

Imperial Airways operated a similar style of service from London to Singapore. This also operated just once a week. The journey took eight days. The timetable for the first legs of the route, from London to Cairo, was identical to the timetable for their Capetown service, except that it was on a different days of the week. This included the overnight train segment

from Paris to Brindisi or v.v There were then overnight stops at Cairo, Baghdad, Sharjah, Jodhpur, Calcutta and Bangkok. Imperial Airways services, firstly to Karachi (to connect with the Indian railway system), were gradually extended across India and then further. Their service reached Singapore from December 1933. From December 1934, the month after this Guide is dated, QANTAS commenced a connecting service from Singapore

to Brisbane.

(Table not shown here)

Air France too operated a weekly service from the "home" country to the colonial outpost in the east – from Paris to Saigon. This occupied nine days. Most of the overnight stops were at the same places. Bradshaw's Guide showed the days of operation, but no times (bottom half, our page 10).

Air France had come into existence in October 1933 by the amalgamation of various French aviation companies. This was not long before this Guide was published.

The third service shown in the Guide to the "Far East" was the Dutch service, notwith-standing the fact that this was the first one to be established. This was a combined service (Continued on page 9)

be established. It dated from September 1929. Locations in this timetable are the closest that the Guide got to Australia.

Now finally to what is the most interesting timetable in the Guide. Or rather what would have been the most interesting timetable, because this is only a skeleton timetable with no details of times, or even of days shown. [some timetables do exist, however.]

One is shown on our page 2, but it is difficult to interpret— Ed] This final timetable (lower illustrations, our page 11, also our front cover) is of the German Zeppelin service from Berlin to Buenos Aires, Argentina. The notes to this timetable indicate various special conditions. The Zeppelin service from Germany to South America lasted from May 1930 to 1936, when the crash of the "Hindenburg" in the US

halted interest in travel by Zeppelin.

#### Conclusion

The November 1934 edition of Bradshaw's Air Guide has recently been republished by Old House Books, P O Box 883, Oxford, OX1 9PL, UK, www.oldhousebooks.co.uk

#### "How railroad men time trains"

VERY RAILROAD ISSUES two timetables whenever the run-✓ ning time of trains is changed, one table for the public and one for the guidance of the engineers and the trainmen. The main difference between the two is that the schedule for the employees contains the time of every train at every station on its route, whereas the schedule for the public only gives time at places where the train stops. Dots and daggers and letters along side of the time figures explain to the engineer and conductor at what points and why he is to stop. The absence of these show that the train is not to stop at all. There is naturally nothing about the conduct of a railroad on which more time and care are spent that these time tables and the growth of railroading between the period not many years ago when the Philadelphia express was held at Newark or elsewhere for some regular passenger who had been belated and the present time when that trains that run distances of 500 miles can be relied on to be at any point on their route on scheduled time, is shown most clearly in the equal growth of the time table. The half minute appears for the first time in the schedule about to be issued for the New York Division of the Pennsylvania Railroad. Minutes have been fine enough divisions of time before. It is explained that the half minute has forced itself into recognition. Modern railroading is so fast, stations have grown so close together and the movement of trains has become so regular that this fine division of time not only can be but has to be made. Nothing greater than half a minute will apply to a train running at the rate of 60 miles per hour between New Brunswick and East Brunswick, which are just a half a mile apart.

The time table in question has many other new features. It is to govern the movements of 226 passenger trains every day. It is no longer an unhandy chart three feet long by two feet wide, like its predecessors, but a thin narrow book, such as some other railroads long ago saw the wisdom of issuing. Its novel features are that its type is kept standing and when any trains time is changed, instead of the change being published, as has always been done, on a separate sheet, apt to be mislaid or lost, the page on which it occurs will

be corrected and reprinted, to be pasted into all the books by a man whose special duty that will be, and who will stamp the back of each corrected book before returning it. The Sunday trains are on yellow leaves, to distinguish them from the others, which are on white paper. Bound with the timetable is a collection of diagrams showing the position of the tracks and signals at the principal junctions and points where the switches are complicated. It is said that engineers learn by heart the switches on certain tracks upon which they are accustomed to run and master thoroughly the switches governing those, but they are thoroughly at sea when, by reason of a blockage caused by a wreck or other irregularity, they receive telegraphic orders to take some track they are not used to. The diagrams give them the fullest information by means of a picture which admits of no misunderstanding.

Heretofore when a special train was to start, a calculation about what speed it was to run at was made, according to the condition of the road at the time warranted. If it was at night when the road is lined with freight trains, a high rate of speed was not considered as safe again as in the daylight, but whenever it was the engineer received his orders to run at the rate determined upon. If he happened to be a very intelligent and self possessed man, used to irregular performances, he. would keep an even rate of speed, but the chances were great that he would run like lightening half the time, then loaf the rest of the way. In all cases the fact that he was coming would have been telegraphed ahead all over the line and every freight engineer along the line would be uneasy and anxious to seek a siding until the extra rumbled by and the danger past. The signalmen and operators in the dispatcher's office were also on tenterhooks trying to determine his whereabouts and the time of his arrival at the points ahead. Now, with the new schedule, all are to be informed that an extra leaving at such a rate, and every man interested can satisfy himself by a reference to the tables just where an extra is or will be at any given moment. In cases where a train from the west had two, three or four hours, as is sometimes the case when a wreck blocks the road, it is to be annulled by telegraph. The schedule is to be

of use again in governing the trains run as second sections of regular trains. Now they are indicated by a flag carried ahead of the engine on the regular, but that entails their being run on the same time, which may be faster than is necessary. Hereafter they will be run on one of the new schedules, and announced ahead over the wires. Railroad men who have considered this invention say that it is a wonder that a railroad could ever have been run without them. A railroad man who was trying to think up all possible uses of the new schedule, said that there is a millionaire cattle dealer in Princeton who frequently orders a special train, as well as a young New Yorker who engages one whenever he is on a lark.

"He always has a friend with him," said he, "and he seems to think that the thing to do is to have a train all to himself. The other day he came-it was the third or fourth time-and said he wanted to go to Philadelphia As quick as possible. He was told it would cost him \$150. We said he could have a car all to himself to any point in any regular train for eighteen regular fares, but he wanted a train and didn't mind the expense. He started at sixty miles an hour, When he got to Trenton he called the conductor and told him he had been trying to think why he wanted to go to Philadelphia and could not make out why it was. He said he thought he'd go back to New York. In that case the new schedule would have been a blessing.'

This article, submitted by NAOTC member Christopher Manthey, [to John Wilkins, Editor of NAOTC's "First Edition") was printed in the January 3, 1883 issue of the Cleveland Plain Dealer and originally in the New York Sun. Can you imagine any major newspaper today running an article dealing with railroad employee timetables? How about a charter train for \$150 ordered at the last minute. It is doubtful if Amtrak could obtain either the equipment or crew on such short notice or if they could figure how to turn a train in Trenton. Question; are any of our readers familiar with any organization that schedules in half minutes?

#### "Making a railroad timetable"

RAVELERS WHO CONSULT THE ever-handy timetable as to the arrival or departure of the particular train that is to carry them either going or coming, probably never give a thought as to the manner in which a modern timetable is made up. To the uninitiated it is a Chinese puzzle, and even those well versed in its mysteries often become confused. How are timetables made? What is the procedure in determining the speed of a train and the exact time and place it shall meet another train? The answer to these questions is to be found in the "Chartroom."

The chartroom is usually in some quiet corner of the general offices of a railway company, and for weeks at a time is locked. But every nows and then the word goes forth that the schedule is to be shortened or lengthened, new trains to be put on, or some change made that necessitates the revision of the time card. Then, from distant points on the system, the division superintendents gather for a conference with the heads of the passenger and freight departments in order to learn the most desirable time fort trains to arrive and depart from terminals. With this information they retire to the chartroom, where there is a separate chart for each district.

The charts are white boards about six feet wide and from two to five feet high. The names of the stations, accurately scaled, are printed on the board at the side, and from the top of the board many colored strings dangle, more suggestive of a parlor game than a tool for laying out the path of traffic and commerce.

The superintendents confer regarding the time at junction points on connecting trains and then work out the schedule on intermediate points on a chart of his division.

Horizontally the chart shows twelve midnight on the left side, and there is a line extending across the chart for each five minutes from that time until the full twentyfour hours have been shown. For convenience each third line, representing a period of fifteen minutes, is in a different color.

Superintendents are supplied with varicolored silk thread, pins and a tack hammer. Red is used to designate a passenger train, green is for a second class or freight train, black is for a third-class or local freight train. Whenever a train is scheduled out of a terminal at a certain hour, a pin is driven at the intersection of the station line and the hour line - this being the beginning - and such other times at various stations as may be desired are determined are determined by drawing the thread over the board to meet the intersection of the various station and hour lines at the proper times. Where necessary tacks are driven to keep the thread on the proper schedule.

Westbound trains run down and diagonal-

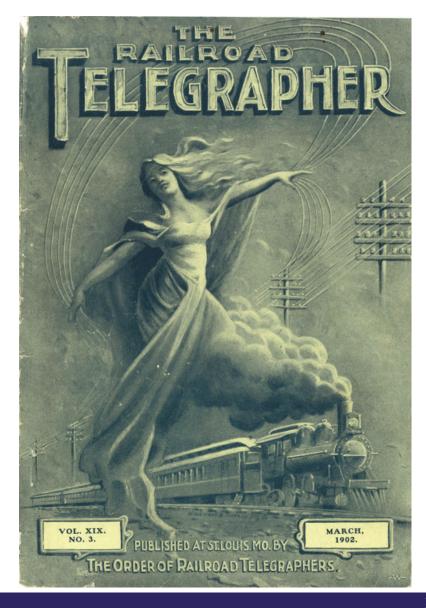

ly to the right. Eastbound trains start at the bottom and run upward and diagonally to the right. Whenever these threads cross a meeting point is indicated, and if this crossing of the threads is between station lines, it is necessary to adjust the time on each train, so that the meeting point will be at the most convenient station. This is done holding by holding the lines crossed at station with a pin. Of course, on double tracks these meeting points are not necessary.

After the chart has been strung, a former issue of the time card with pen and ink, is brought into use and the superintendent begins at original terminal, looks at the station line, and whenever any string representing a train crosses this station line, he notes the time as shown on the proof of the time card. One train at a time is read from start to finish, after they have all been checked, they are rechecked to see that all meeting points are properly made and noted on proof, after which the timetable is ready for the printer.

To make a successful time card a superintendent must be perfectly familiar with the

grade and track conditions, and when stringing the thread must allow more time for unfavorable grade, railroad crossing and other unusual stops, so that the running time of the train will be uniform. Whenever it is desirable to make a meal stop a pin is put in at the proper station, and the string run horizontally to the line until the required number of minutes lines have been passed, when it is again taken down the board at the proper degree of speed. By making the string more vertical, the speed is increased, as there are fewer minutes lines crossed. By swinging thread to the right the speed is decreased, and by the use of pins this can be arranged between each station to suit conditions.

This article, also submitted by NAOTC member Christopher Manthey (and printed in **The First Edition**), was printed in the December 1907, Volume 24 Number 12 issue of The Railroad Telegrapher. This was the monthly publication of the Order of Railroad Telegraphers."

## Buses in Sydney - Timetables of Yesteryear.

## 1. Route 145: Maroubra Beach - Central Railway

By Robert Henderson

HIS IS THE FIRST OF A series of short articles about old bus timetables around Sydney.

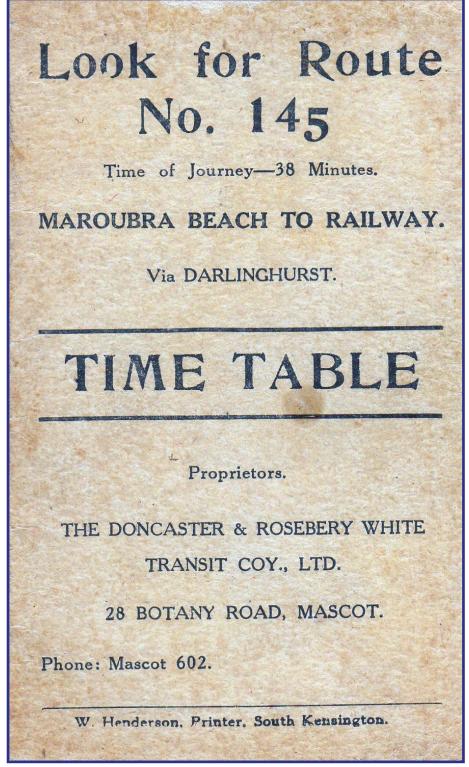

**Background:** I acquired this timetable in a recent ATA auction. It is dated 22 January 1927. It shows a bus route between Maroubra Beach and Central Railway.

After the Little Bay, later La Perouse, tram line was opened along Anzac Parade through what is now Maroubra Junction in 1901, houses and a shopping centre grew around that tram line. It was not until the 1920s that growth moved from there towards the beach, as the Government released Crown land for settlement. Maroubra's large beach then became more popular. This caused the tram to be extended there in 1921 and our Route 145 bus probably started in 1924.

Timetable: The format of the timetable is typical of many routes at the time, where the same timetable applied seven days a week, except that, as can be seen, weekend and Public Holiday trips started at 6.53am rather than 6.03am on weekdays. The route between Maroubra Beach to Maroubra Junction provided a reasonable degree of competition with what was then known as the Maroubra Bay tram line. Between Maroubra Junction and the City, Route 145 competed directly with City tram services from both Maroubra Bay and La Perouse (and other tram routes as it came closer to the City).

The timing point "Cleveland Street Junction" means the intersection of Anzac Parade and Cleveland Street, Moore Park, which curiously the tramway authorities referred to as Anzac Parade Junction. "Raleigh Park" in one of the notes in the timetable refers to the WD & HO Wills tobacco factory in Todman Avenue, Kensington.

Note the typographical error in the last four lines of the timetable in which the digit "1" appears to have been omitted

from the times leaving Central Railway.

Government Gazettes of the 1920s laid down both the route and running times of private bus routes. The Gazette dated 15 October 1926 specifies some different running times than those actually displayed in the timetable. Whereas the timetable shows the running time from Maroubra Beach to Maroubra Junction as seven minutes, the Gazette showed it as nine minutes. Similarly between Maroubra Junction and Gardeners Road, the timetable shows seven and the Gazette nine minutes. Examples of bureaucracy being out of step with reality?

**Operator:** The Doncaster & Rosebery White Transit Co, 28 Botany Road, Mascot, owned by T Stalker & W Langford. It was renamed South Sydney Bus Co from September 1927.

The Company also operated at least these other routes in the same vicinity:

- 130 Maroubra Junction Central Railway
- 131 Long Bay (now Malabar) Central Railway via Bunnerong Road & Darlinghurst
- 132 Wilson Street, Botany Central Railway via Maloney Street, Eastern & Day Avenues
- 133 Kensington Central Railway via Darlinghurst (appears to have been a short-working of 132), but by 1931 extended to Mascot Aerodrome
- 146 Mascot Brighton-le-Sands
- 237 Mascot Central Railway via

Gardeners Road & Darlinghurst, but by 1929 extended to Brighton -le-Sands (below)

All these routes competed to a greater or lesser extent with tram lines and so ceased on 31 October 1931, when the State Transport (Co-ordination) Act was passed, which imposed a prohibitive tax on private bus routes that were competitive with tram routes or railway lines. Routes 131, 145 and 237 were soon after partly reinstated as feeder routes to tram lines. But Route 145 had by then been transferred to M Jones, who, not long after 31 October 1931, was authorised to run it as a feeder from Maroubra Beach to Maroubra Junction, where passengers would have had to change between bus and tram to travel to or from the City and pay a separate fare on each mode.

Route: The route between Maroubra Beach to Maroubra Junction both before and after 1931 was along Maroubra Bay Road. Before October 1931, when Route 145 buses ran into the City, they operated from Maroubra Junction via Anzac Parade, Flinders Street, Oxford Street, Liverpool Street, Elizabeth Street and Eddy Avenue to Central Railway. This part of the route totally followed tram lines. As authorised as a feeder, it was presumably no

longer regarded as being in competition with the tram line, which was mainly located several blocks to the south, along easier grades than Maroubra Bay Road.

Later history of Route 145: The route was transferred from Mr Jones to the Department of Government Transport (DGT) on 10 August 1952, at the same time as the Department also took over another nearby private operator's Route 138 between Kensington and both Botany Cemetery and Botany Town Hall. Under the DGT Route 145 was renumbered 396, in accordance with the geographical system that then applied only to Government bus routes. When the last of Sydney's trams from the Circular Quay and the Railway to Maroubra Beach and La Perouse were replaced by buses on 25 February 1961, the bus routes replacing the Maroubra Junction-Maroubra Beach section of tram line were rerouted via Maroubra Bay Road instead of the more circuitous tram line. The replacing bus routes were numbered 395 from the Railway and 396 from Circular Quay and remain as such to this day.

PS: The timetable's printer is, to the best of my knowledge, no relation.

# Langi Logan Letter from Albert Isaacs

HE JANUARY 2014
edition of *The Times* was particularly interesting! In your article "Going for gold on the VR" you talk about worker's train for miners and you say: "There appears to have been only one such service in Victoria..."

There was also a similar service for mine workers Langi Longan-Ararat. Langi Logan is 7.5 km from Ararat on the Adelaide-Ararat-Melbourne/ Portland line. One can still see the mullock heaps from the old mine when one passes Langi Logan on the *Overland*.

There is very little on the internet about this service other than a message from a Railpage correspondent that really does no more than confirm the existence of the service: (http://www.railpage.com.au/f-t11358235-s15.htm). However, Geoff Lambert has reminded me that during my editorship of *The Times*, in March 1985 to be exact, I wrote an article, "This train is MINE", which dealt with the Langi Logan service and that was based on some quickly-issued S notices from August 1916.

So, once again *The Times* is able to provide research into a subject that no-one else knows much about! I would love to hear from anyone who can add to my very patchy information.

Editor's Note: I too was convinced that I had this TT in my collection, but could not find it. However, almost at "press time", a search of The Times Cumulative Index revealed Albert's original article.

I had almost forgotten that one of Albert's pet projects was the Cumulative Index to The Times. I digitised the Index many years ago and this incident has prompted me to bring it up to date. There have been 2,800 articles by some 280 authors. The index will be available in a future Distribution List as an Excel or PDF document

-Geoff Lambert
